Hugging Face

- **Open-Source ML Hub**: Hugging Face is a popular platform providing an extensive repository of pre-trained machine learning models, particularly for Natural Language Processing (NLP), such as transformers for tasks like text generation, translation, and question-answering.
- **Transformers Library**: It offers the widely-used Transformers library, which makes it easy to integrate and fine-tune state-of-the-art transformer models from BERT, GPT, T5, and many others in a few lines of code.
- **Community and Collaboration**: Hugging Face fosters a collaborative environment where researchers and developers can share models and datasets, and it also provides tools for deploying, managing, and scaling ML models through their Inference API and Spaces platform.
